<b>∷</b> Instructions		
1.	Which transport protocol is commonly used for web browsing, file transfer, and email communication?	1 point
	○ UDP	
2.	Which subnet mask is associated with a Class C network?	1 point
	O 255.0.0.0	
	255.255.0.0	
	255.255.255.0	
	255.255.255.255	
3.	Which transport protocol guarantees the order of packet delivery?	1 point
	● TCP	
	○ UDP	
4.	Which network protocol is responsible for resolving MAC addresses to IP addresses?	1 point
	ARP	
	O DHCP	
	○ ICMP	
	○ NAT	
5.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?	1 point
5.		1 point
5.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?	1 point
5.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP	1 point
5.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP	1 point
	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP	
	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?	
	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments	
	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices	
	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access	
6.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access	
6.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks	1 point
6.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks  Which transport protocol provides flow control and congestion control mechanisms?	1 point
6.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks  Which transport protocol provides flow control and congestion control mechanisms?	1 point
6.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks  Which transport protocol provides flow control and congestion control mechanisms?	1 point
7.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks  Which transport protocol provides flow control and congestion control mechanisms?  TCP  UDP	1 point
7.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP  UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks  Which transport protocol provides flow control and congestion control mechanisms?  TCP  UDP  How many bits are used to represent the network portion of an IPv4 address in a Class B network?	1 point
7.	Which transport protocol is responsible for breaking data into packets and reassembling them at the destination?  TCP UDP  What is the purpose of the default gateway in a TCP/IP network?  To connect different network segments  To assign IP addresses to devices  To provide secure remote access  To forward network traffic between networks  Which transport protocol provides flow control and congestion control mechanisms?  TCP  UDP  How many bits are used to represent the network portion of an IPv4 address in a Class B network?  8 bits	1 point

9.	Which transport protocol is commonly used for streaming media and real-time communication?	1 point
	O тср	
	● UDP	
10.	Which network protocol is responsible for assigning IP addresses to devices on a network?	1 point
	● DHCP	
	O DNS	
	○ FTP	
	○ SMTP	
11.	Which transport protocol is faster and more suitable for time-sensitive applications?	1 point
	O тср	
	● UDP	
12.	Which network protocol provides secure file transfer over an encrypted connection?	1 point
	O DHCP	
	○ DNS	
	● FTPS	
	○ SMTP	
13.	Which transport protocol provides reliable, connection-oriented communication?	1 point
	● TCP	
	O UDP	
14.	Which network protocol is used for translating domain names to IP addresses?	1 point
	O DHCP	
	DNS	
	○ FTP	
	○ SNMP	
15.	What is the loopback address in IPv4?	1 point
	O 127.0.0.0	
	127.0.0.1	
	O 192.168.0.1	
	O 10.0.0.0
